New Model Update

I hope everyone had a wonderful Thanksgiving holiday. As promised, subscribers will start receiving an additional model that trades the market's largest technology and healthcare stocks.

Given that this is the first week, all of the trades are new “buy” signals.

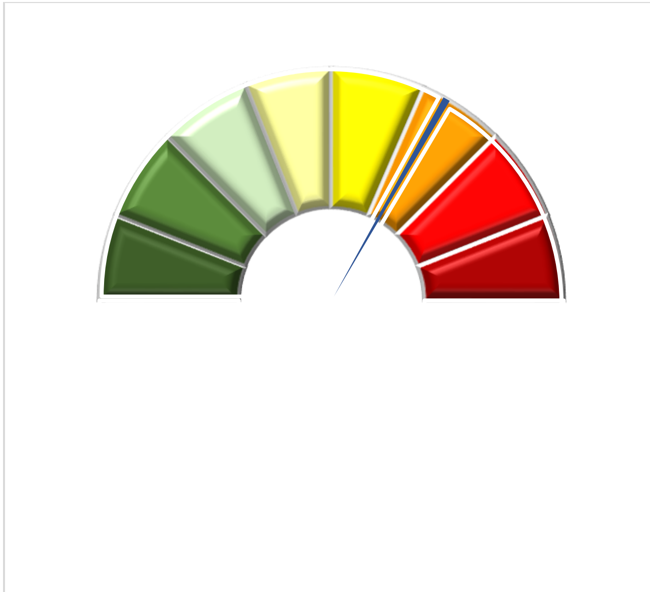
Interestingly, since the start of this newsletter, the largest stocks have performed the best. Meanwhile, the micro-cap stocks are now about flat. Over time, I expect the opposite performance scenario. Many large technology stocks have performed poorly this year. One advantage of the model in this newsletter is that in addition to fundamental data, trends are analyzed as well. My trend-following measures are custom and unique. They're not available anywhere else. The formulas are well tested and have performed well in real-time.

I think it pays to be on the right side of trends regardless of your investing strategy. Even if you're the most dyed-in-the-wool value investor, you’ll be rewarded by paying attention to how the stock is trading and being on the right side of the trend.

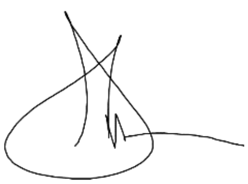
The *Risk-O-Meter* stays on a "buy," although risks increased this week. The credit market models I track within the *Risk-O-Meter* are flashing red. These are my favorite models. By themselves, the returns are significant when trading ETFs based on the signals, and credit markets tend to be better at spotting risk than equity markets.

In recent issues, I have mentioned that the market is overbought and due for a pullback. I do not know if Friday's nasty day (one of the worst in 2021) is the start of a new trend or not. Of course, the market is very sensitive to new variants of COVID. I suspect there will be plenty of variants. That's how viruses survive.

Regardless, there’s no reason to be complacent heading into 2022. Stay alert!



Happy trading!



John
